# Quickly Remove Unconnected Nodes
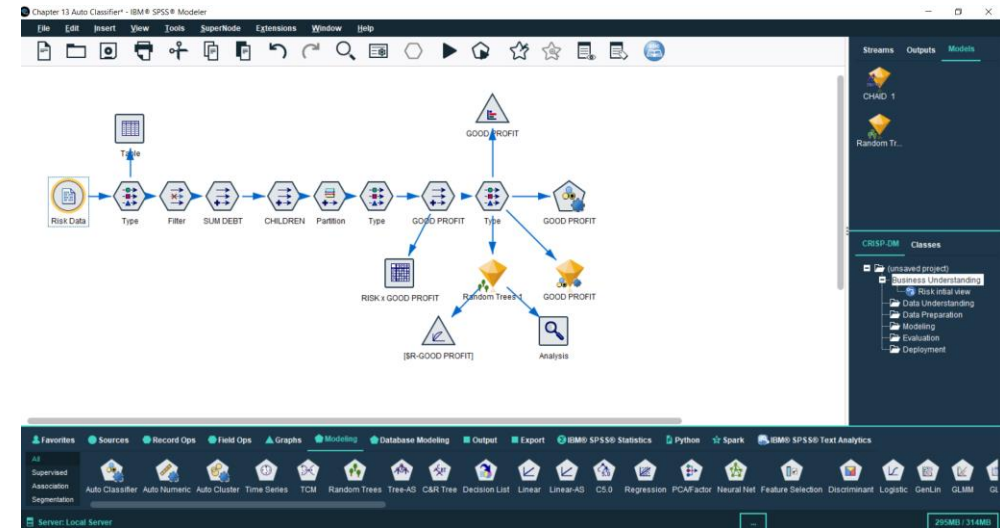

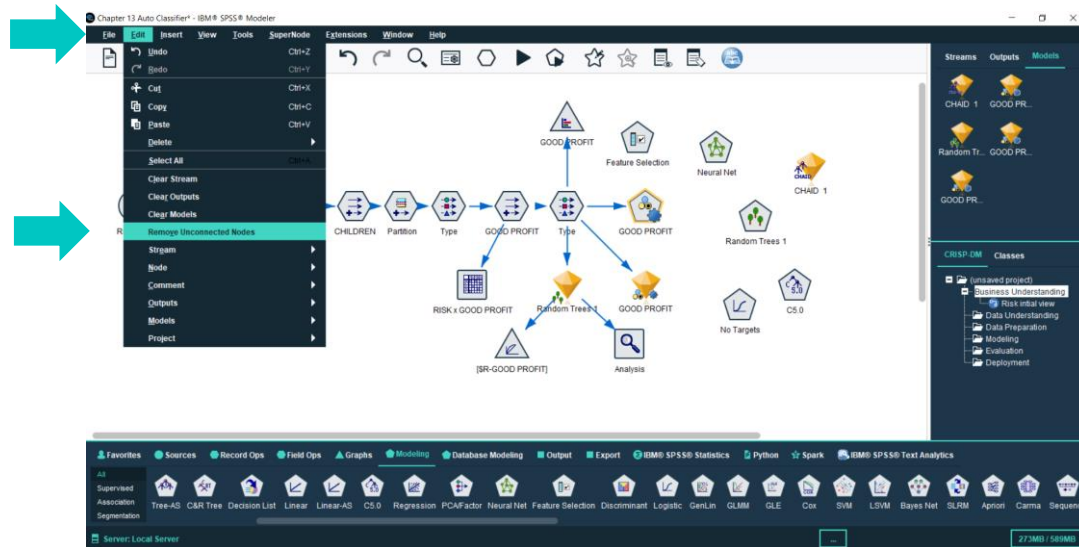

Tech Tips – IBM SPSS Modeler

Tech Tips – Quickly Remove Unconnected Nodes

- Here's a quick tip to clean up your stream. As you are working you may have used many nodes to prepare your data and build models.

- For example, if you run an **Auto Classifier** node, you can compare the performance of multiple models. From the node, individual modelling nodes can be generated to the stream. Below, the **Random Trees** model generated from the **Auto Classifier** node is connected to the stream. There are several nodes, however, that are not connected to the stream and we want to remove these nodes quickly.

Tech Tips – Quickly Remove Unconnected Nodes

- To clean up the stream, go to the **Edit** menu and select **Remove Unconnected Nodes**. This will clean up the stream.

Thank You
